

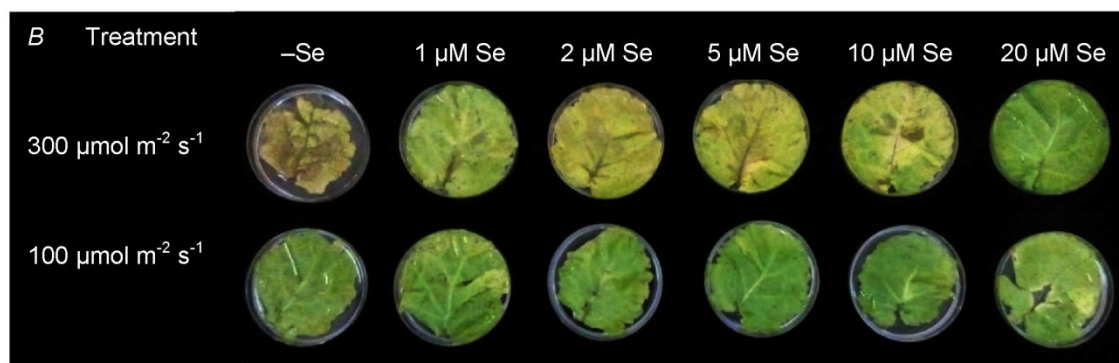

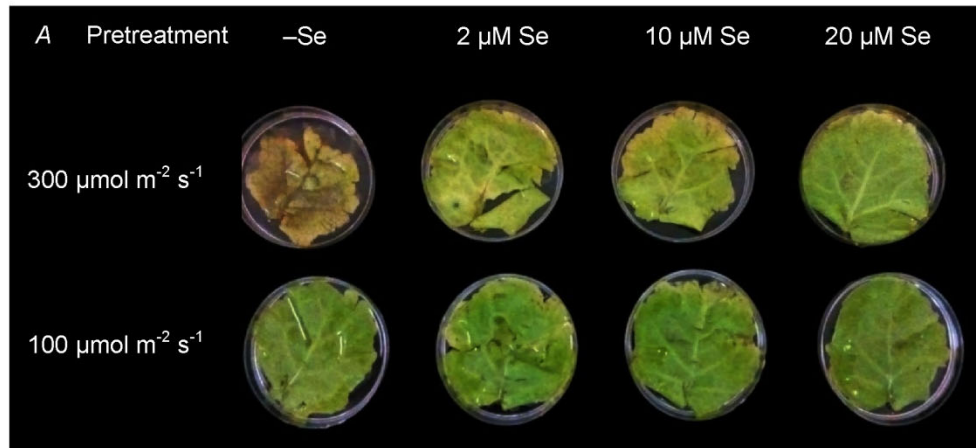

Fig. 2S. Chlorosis and necrosis in the fully expanded leaves of oilseed rape plants either pretreated (*A*) or treated (*B*) with different concentrations of Se (μM Na_2SeO_4) under high (300 $\mu\text{mol m}^{-2} \text{s}^{-1}$) or low (100 $\mu\text{mol m}^{-2} \text{s}^{-1}$) light intensities two weeks after detachment.
